

Eduardo Perez Rocha

eduardopzrocha@gmail.com | github.com/eduperezrocha | [Portfolio](#) | EU Citizen

Education

University of San Diego — Computer Science; Minor in Philosophy

Aug 2021 - Dec 2025

Korea University, Seoul — Study Abroad

Spring 2023

Skills

Programming: JavaScript, Python, Java, C

Frontend: React, Vite, Material UI (MUI), Forms/Validation, Tailwind

Backend: REST APIs (Java), Spring Boot, JSON, Node.js

Tools: SQL, AWS, Git, Docker, Figma, Trello, Slack, Blender

Languages: Spanish native, English C2/Fluent, Korean B1

Experience

Software Developer, DH Skate Company [↗](#) — Aguascalientes, Mexico

May 2025 – Present

- Deployed a production Vendure (Node.js/TypeScript) e-commerce backend with PostgreSQL on a self-managed VPS using Dokploy and Docker.
- Built a Next.js 15 storefront with SSR and a custom GraphQL client, optimized for sub-2s mobile loads across 100+ product pages.
- Integrated Mercado Pago Checkout Pro with a webhook listener that verifies payments and triggers Spanish-language order confirmation emails.
- Engineered a multi-carrier shipping calculator with FedEx Rates API (OAuth 2.0) and Skydropx PRO, delivering live quotes from 5+ carriers at checkout.
- Implemented a facet-based discount system with crossed-out prices across grid, detail, cart, and checkout, manageable from the admin dashboard.
- Established CI/CD pipelines via GitHub Actions and Docker Hub for zero-downtime deployments with persistent asset volumes.

Software Developer Intern, Santa Homes Real Estate — Aguascalientes, Mexico

May 2024 – Sep 2024

- Built a Java Spring Boot REST API for tenants, leases, and payments, backed by MySQL/JPA.
- Designed the SQL schema and migrations; enforced validation and unique keys to prevent duplicates.
- Implemented a CSV import to reconcile bank statements.
- Added a scheduled job to flag overdue balances and send email reminders using JavaMail.

Projects

OURSearch — Student-Faculty Research Matching Platform [↗](#)

Aug 2024 – May 2025

- Digitized Excel-based workflows by building a platform connecting students and faculty to research opportunities.
- Implemented role-based access control for student, faculty, and admin users with React Router guards and Spring Security.
- Integrated Google OAuth2 SSO for authentication.
- Built a REST API with 40+ endpoints and Protocol Buffers serialization to support cross-entity search.
- Delivered an admin dashboard with full CRUD for platform variables, user profiles, email templates, and FAQs.

Compressor and Decompressor [↗](#)

- Implemented a Java LZW-style text compressor/decompressor using a custom chained hash map with dynamic rehashing.
